

# PRICE QUOTATION

EMBEDDED SYSTEMS & TINYML DEVELOPMENT

Quote # 2026-001

Date: July 2, 2026

PREPARED FOR:

**ResqBot**  
Regional Science High School III Students  
Olongapo City, Philippines

PREPARED BY:

**PROTON LABS**  
facebook.com/proton.labs.services/  
Specialized in Edge AI & TinyML Solutions

| SERVICE DESCRIPTION                                                                                                                                                                                                                                                 | AMOUNT (PHP)  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>1. Project Consultation &amp; Architecture</b><br>Initial scoping meeting, definition of peripheral hardware constraints (memory, power, latency), and curation of a formal bill of materials.                                                                   | Complementary |
| <b>2. Wiring &amp; Schematic Diagram Design</b><br>Creation of a neat, precise electronic wiring layout and hardware schematic outlines mapping pins between the microcontroller unit (MCU), camera module, power management units, and sensor integrations.        | P1,500.00     |
| <b>3. TinyML Model Optimization &amp; Training</b><br>Preprocessing and ingestion of the client's existing image database for human recognition. Compiling, training, quantizing to INT8 for edge deployment, and converting to a static C++ array.                 | P1,500.00     |
| <b>4. Firmware Programming &amp; Edge Integration</b><br>Writing the main device application logic, configuring camera frame capture buffers, integrating the deployed local TinyML model, and defining trigger output pins. Delivered with cleanly commented code. | P3,000.00     |
| <b>5. 3D Modeling &amp; Enclosure Design</b><br>Custom 3D modeling of the robot's mechanical components, camera positioning housings, and core electronics protection shell designed for production/3D printing.                                                    | P1,000.00     |

TERMS & CONDITIONS

- Hardware Provision:** Client provides all physical components (MCU, camera, etc.).
- Database Readiness:** Pricing assumes the pre-existing database is clean and labeled.
- Revision Scope:** Includes 1 major round of functional adjustments post-handover.
- Payment Plan:** 50% initial downpayment to commence; 50% upon final codebase walkthrough.

Subtotal: P7,000.00

**Total Project Fee: P7,000.00**

 **Budget Split: P1,400.00** per person  
(Evenly split across the 5 hiring group members)
